DEC 10 1997

From: Commander, Atlantic Division, Naval Facilities  
Engineering Command  
To: Commander, Naval Base Norfolk (N45)  
Subj: GROUNDWATER USE AT NAVAL BASE, NORFOLK AND ST. JULIENS  
CREEK ANNEX, CHESAPEAKE, VIRGINIA

1. LANTDIV is currently performing studies under the Installation Restoration program for various sites at both Naval Base, Norfolk and St. Juliens Creek Annex. In preparing these studies, we need to consider all potential uses of the groundwater at the sites. We assume that groundwater could be used for non-potable uses such as watering lawns or washing cars. We would like to know if there are any wells on these bases used for potable water, and if there is any likelihood that the Navy will use groundwater wells for potable water in the distant future.

2. Request that Commander, Naval Base, Norfolk provide information that will enable us to ascertain what the Navy's current and possible future use of the groundwater is at these bases. We are specifically interested in the use of groundwater for potable water, but information on any other current or planned uses would also be helpful.

3. If there are any questions, please contact me at (757) 322-4587.
